

At the Erwin meeting there were 11 attendees sitting around 3 tables. Data were captured using the World Café approach to large group discussion, which yields a set of notes taken by table moderators during small group discussions taking place over multiple rounds. For the purpose of the Community Health Roundtable Meetings, participants were asked to address in their conversations the question, “**What can you do to improve health in the community?**” At the end of two rounds of small group discussion, notes were collected from the table moderators, or “Table Hosts”, to be used for a final large group discussion to allow for further comment and clarification. These notes have been collated and analyzed with the results presented below.

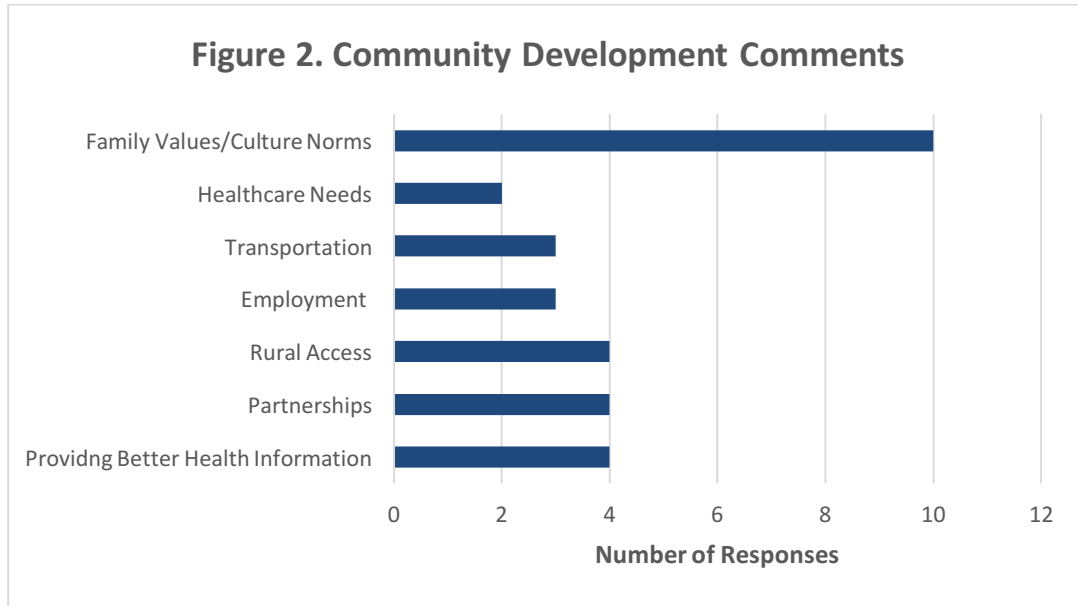

Main Topics of Discussion

These are major categories of discussion among the participants, within which several sub-categories were identified.

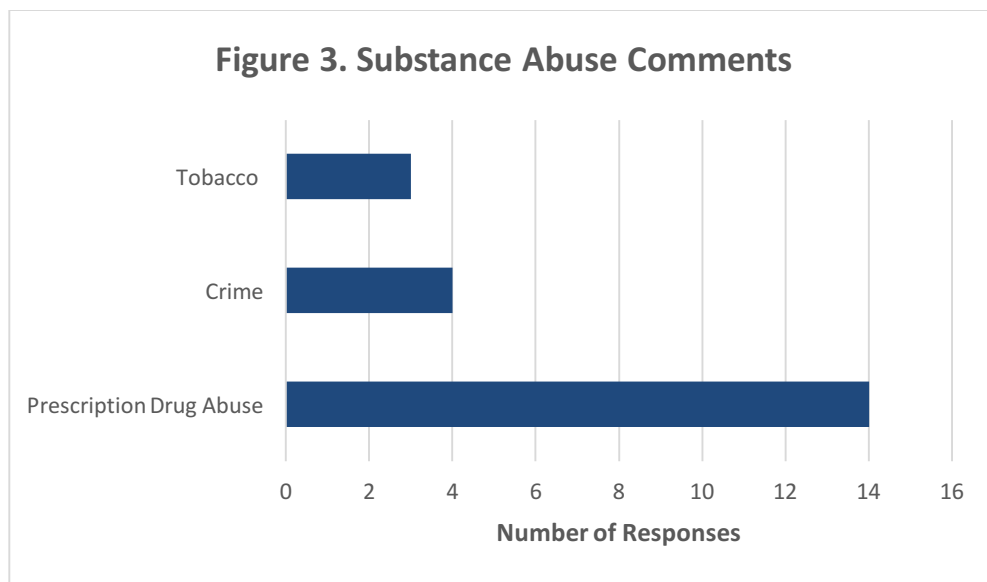

- Community Development
- Substance Abuse
- Nutrition and Physical Activity
- Education

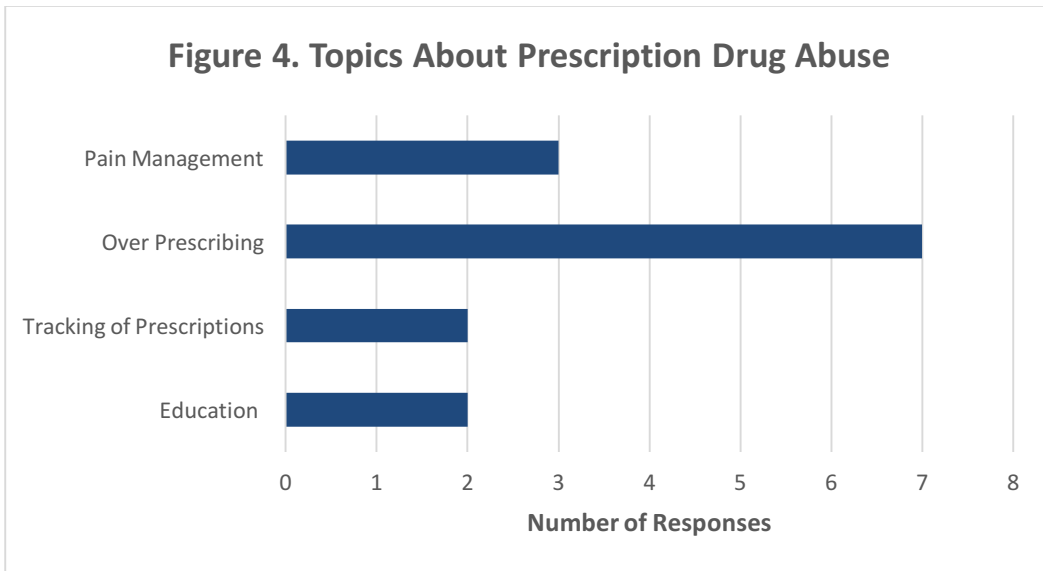

Community Development was characterized by concerns about family values and cultural norms, providing better health information, partnerships, rural access, employment, transportation and healthcare needs. Figure 2 displays the rate of Comments in each of these categories.

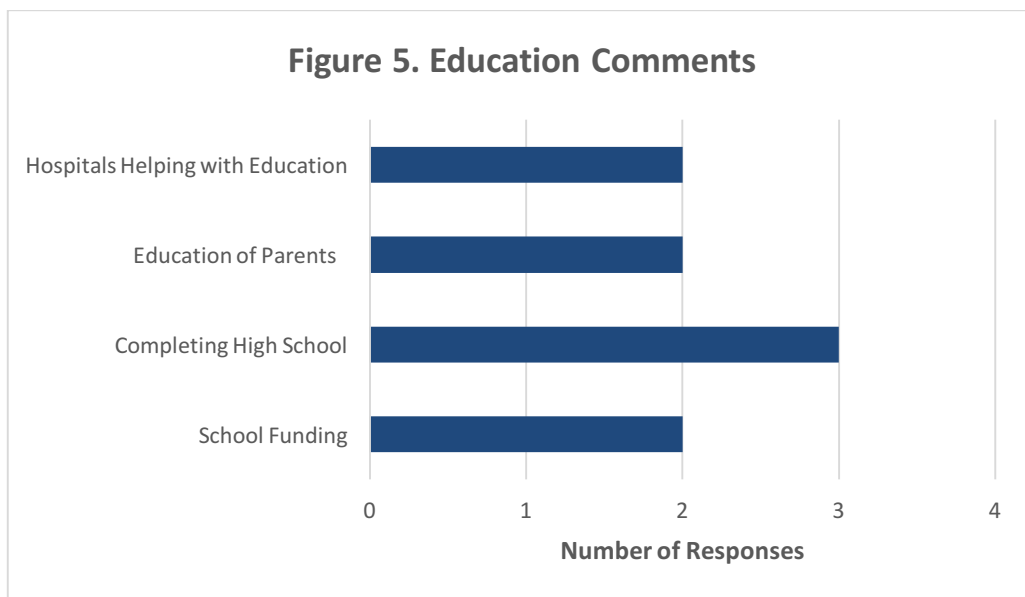

Substance Abuse was the second largest topic of concern among the attendees. Focus areas within this topic included: prescription drug abuse, crime, and tobacco. There were several categories related to prescription drug abuse identified from the notes including over prescribing, education, pain management and tracking of prescriptions. Figure 3 shows the distribution of Comments around these categories. Figure 4 displays the frequency of Comment for each of the topics surrounding prescription drug abuse.

Education is a broad topic that was prevalent within the majority of discussion topics. Ideas specific to the types of education, the targeted age group, as well as setting were included in this major topic. Subgroups within the topic were partnerships, communication, high school completion and education of parents. Participants indicated the need for increased resources, education outside of the schools, and collaborative school system infrastructures. Figure 5 displays Comment frequencies within the subgroups.

Nutrition and Physical Activity was a prominent concern among the meeting participants. Folks indicated a need for education in the schools around nutrition and physical activity as well as the need for convenience and increased availability of healthy food. Sub-categories developed for this summary analysis include education, availability/convenience of healthy foods and food preparation. Figure 6 displays Comment frequencies for these subgroups.
